

UltraShipTMS

Joseph Librizzi
Vice President Sales

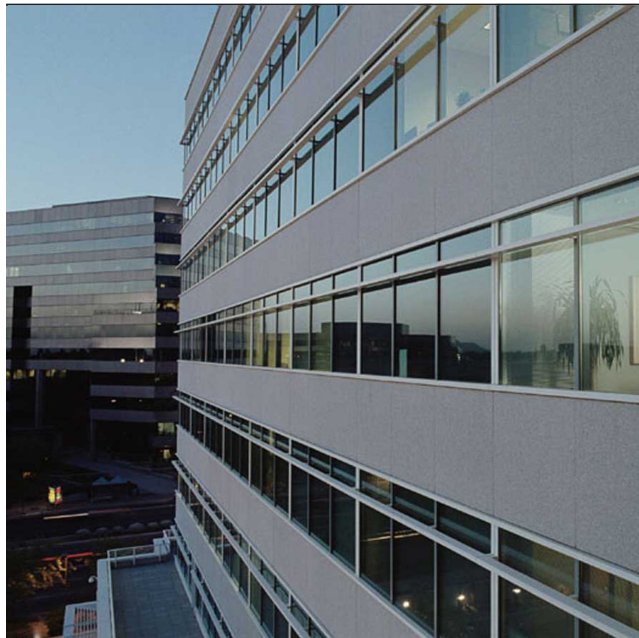

Company Mission:

UltraShipTMS™ makes logistics simple again with a complete transportation management system for end-to-end visibility and control without the complex implementation and the costly licensing and consulting fees. It's logistics the best way ... your way.

UltraShipTMS™ makes total network visibility and control over inbound and outbound transportation possible with its fully-customized transportation management system. The transaction-based web software offers logistics managers a powerful solution with no-risk, low-cost implementation and rapid deployment anywhere in the world.

Ultra Logistics' transportation management software, UltraShipTMS™, gives logistics managers total network visibility and control over inbound and outbound transportation, ensuring proper coordination, optimal planning and consistent execution. UltraShip offers a fully-customized TMS configured for your operation without a big up-front implementation fee. The web-based systems architecture integrates silo applications for true end-to-end information sharing and process accountability.

From annual budget forecasting to daily execution compliance and payment audit, UltraShip gives you visibility and reporting to optimize your entire network. Inbound and outbound transportation tools ensure cost accountability for each shipment.

UltraShipTMS™ delivers

advanced functionality inside the four key phases of the transportation management process: Planning, Executing, Reporting and Tracking.

Plan.

Plan transportation budgets with confidence and improve your network. UltraShipTMS™ provides the total network visibility and historical perspective required to plan your supply chain more effectively on a daily, monthly and annual basis. You continuously optimize your network. You deliver more accurate budgets. You implement routing guides that ensure performance.

Execute.

From a winning plan to effective reality. UltraShipTMS™ gives you the ability to manage all shipping activity both inbound and outbound. From purchase order to tender

management, you control every transaction, which includes using Private Carrier Network™ to handle off-routing guide moves. Your entire shipping operation is executed for maximum efficiency and cost containment.

Track.

See it all for the first time.

UltraShipTMS™ integrates data from your existing systems and your shipping operations, acting as a central command center that tracks all of your transportation activities. Because the system is web-based, you have access to your information anywhere 24 hours a day. You control the information and who has access.

Report.

Measure real results.

UltraShipTMS™ offers the benefit of customized reporting to slice and dice your supply chain data any way you want. Focus in on individual transactions by carrier and lane or pan back for the big picture. View live data queries for timely execution decisions or generate historical reports for planning and analysis.

Ultra Logistics is a leader in truckload carrier management and domestic logistics optimization. The company has built a track record for excellence working with Fortune 1000 clients in both retail and manufacturing since 1996. UltraShipTMS™ was created by industry experts at Transportation Management Solutions LLC, leveraging decades of logistics experience in all modes of transportation.
